Amit – We're available tomorrow or Wednesday between 2:00 – 3:00.

It's likely that the area of highest impact will be similar for the other scenarios. We'll know for sure when we complete the modeling.

Regards,

John

John (and All):

Thanks you so much to you and your team for ongoing support. Please let me know your team availability for next week to have a quick conference call.

Meanwhile, I have a quick question. Would all scenarios (both models) have same trajectory for higher relative distribution (say 0.5 and higher) towards immediate southwest of the site? Please let me know.

Thanks again and have a great weekend everyone.

Subject: Preliminary CALPUFF Results for Riverside Ag. Park Scenario 1

Amit – Attached are the preliminary draft CALPUFF results for scenario 1. As I indicated earlier today, the AERMOD results should be available in 7-10 days. Results for the other scenarios are also in progress. Please let us know if there are any questions or clarifications needed on the attached results.

Regards,

John
